Abstract 202ku05.wo

DeNO_x process

- 5 A process for reducing the content of NO_x and N_2O in gases, in particular in process gases and offgases, which comprises the measures:
 - a) addition of at least one nitrogen-containing reducing agent to the NO_x and N_2O -containing gas in at least the amount required for complete reduction of the NO_x ,
 - b) addition of a hydrocarbon, of carbon monoxide, of hydrogen or of a mixture of one or more of these gases to the NO_x- and N_2O- containing gas for the reduction of the N_2O and
 - c) introduction of the gas mixture into at least one reaction zone at temperatures of up to 450°C which contains one or more iron-laden zeolites,

is described.

The process can be used, in particular, in nitric acid production, for offgases from power stations or for gas turbines.
